

HTTP Request-Response Sequence Diagram

Overview:

- Step 1 Covers the 3 way handshake that takes places before a request is sent from the client such that the connection is reliable and safe
- Step 2: Once a connection is established, the user is free to send a request to the server
- Step 3: The server receives requests and processes them if possible
- Step 4: The reply to the client is sent
- Step 5: Once the transaction completes and there's no other requests needed, the connection closes
